TITLE : SHOP MONITORING SYSTEM

ABSTRACT : PROBLEM TO BE SOLVED: To make quick monitoring performable while efficiently gathering log data.

SOLUTION: A shop machine 20 is provided with a discrimination means, a difference log output storage control means, a preparation request generation output means, a transmission file preparation means and a file transmission means. The shop machine 20 monitors a log file 23L, and in the case of discriminating that an application log set beforehand is stored, the application log is outputted and stored in a difference log file 23D. Also, in the case that a preparation request is automatically outputted, the application log outputted and stored in the difference log file 23D is compression-processed, a transmission file 23T is prepared and the transmission file 23T is automatically transmitted through a network 3 to a monitoring machine 30.
